

# At 2 1/2 lbs, It's A Real Heavyweight In Booster Amps

The KMW1031KT is the lightest, most compact 20-watt booster amplifier kit for military transceivers. The entire kit weighs less than 2.5 lbs. But it's a real heavyweight when it comes to performance, durability, and ease of use.

It covers the 30 – 512 MHz frequency and is SINCGARS, HAVEQUICK, IW, HPW and DAMA capable. It supports all 5 watt tactical radios such as Harris AN/PRC-152, Thales MBITR AN/PRC-148 plus others.

The KMW1031 can be powered by a single battery or a 12 or 24 volt vehicle system. The portable, waterproof kit includes everything needed to boost radio signals: Amplifier, antenna, RF cables, battery cable and tactical vest pouches for both the amp and antenna.

It couldn't be easier. Or more dependable.
